

Environmental Pollution

1. Define pollution.

The substances that pollute the environment are called pollution. They can be produced by natural processes or man's activities

2. Write Yes or No in the given table.

Reason of pollution	Air pollution	Water pollution	Land pollution
Cutting of trees	Yes	No	No
Polluted water	No	Yes	No
Garbage	Yes	Yes	Yes
Industrial wastes	Yes	Yes	No
Use of chemical fertilizers of insecticides	No	Yes	Yes
Plastic	Yes	Yes	Yes
Smoke from factories	Yes	No	No
Burning plastic and garbage	Yes	No	No

3. What is the connection between the greenhouse effect and global warming?

Greenhouse gases at certain levels do not harm the environment. But when the concentration of gases increases it traps enormous heat on the earth surface. This lead to an increase in the earth's temperature. This phenomenon is called global-warming.
