

Cellular Organization

The living organisms made of only one cell are called unicellular organisms
e.g amoeba, bacteria

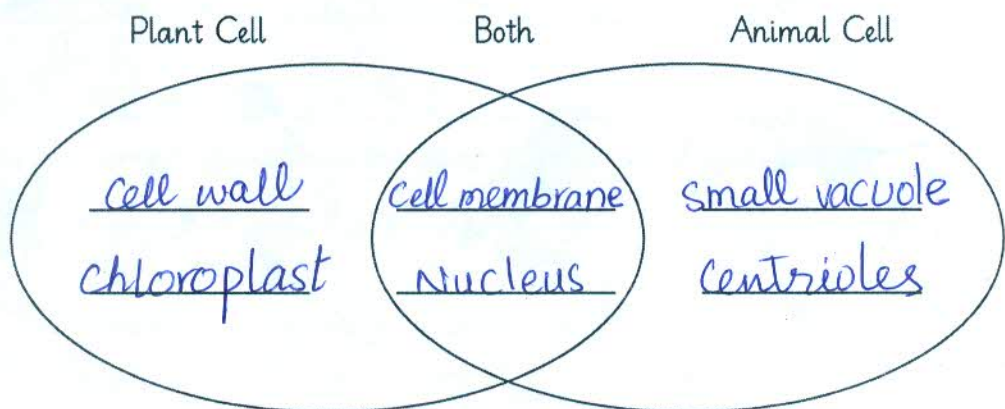

The living organisms made of more than one cell are called multicellular organisms
e.g plants, animals.

1. Paste / draw pictures of unicellular and multicellular organisms.

Unicellular Organisms

Multicellular Organisms

2. Complete the venn diagram to show what parts plant cell have and what part animal cells have.

3. Suppose you saw a small organism moves across your book. Would you conclude that this organisms was multicellular or unicellular?
