

## Reading / Writing

◆ Read the following passage and answer the questions given below.

Ants are found everywhere in the world. They are amazing little creatures. They make their home in buildings, gardens, etc. They live in anthills. They are very hardworking insects. It is estimated that there are about 20,000 different species of ants. For this reason ants have been called Earth's most successful species.

Ants range in colour from red to black, and they can range in size from one quarter inch for a worker carpenter and to three-quarters of an inch for a queen.

They are always looking for food. They like most is sugar. Some eat the dead bodies of other insects. They can not see but smell; for they have feelers in their noses. The feelers help them decide if what they touch is good enough to eat.

Q1. Why ants are called most successful species?
